OVERVIEW I'm a CSE student passionate about working with data to find insights that drive real-world solutions. I have hands-on experience with data analytics, machine learning, and graph databases like Neo4j. With a strong foundation in programming and data modeling, I'm excited to apply my skills and keep learning while contributing meaningfully to a team.

EXPERIENCE **Brainy Beam Technologies Private Limited, Ahmedabad.**

06/2023 - 08/2023 - Internship

- Prepared reports summarizing project progress and results for management review.
- Worked on car recommendation model and Executed project tasks and acquired new proficiencies

CSRBOX: Data Analytics Internship (2024 – 2025)

- Built a machine learning model to detect suicide risk based on behavioral and sentimental data.
- Delivered findings through detailed reports and discussions with the team.

EDUCATION **Navrachana International University, Vadodara.(GPA: 8.7)**

2024- 2027 Bachelor of Technology in computer science engineering

Government Polytechnic for Girls Ahmedabad, Gujarat.

2022 - 2024 Diploma in Computer Engineering

- Secured CGPA: 9.42 (Secured SPI: 10 in final semester)

THE Bright School Vadodara

07/2024 High School Studies (SSC)

SKILLS	Data Analytics: Python (Pandas, NumPy), SQL, MongoDB Visualization: Matplotlib, Seaborn, Tableau (basic) Machine Learning: Scikit-learn, Predictive Modeling, Sentiment Analysis Graph Databases: Neo4j (Certified Professional), Cypher Query Language Programming: Python, Java, C, C++ Others: Web Scraping, Application Debugging, Mobile App Development, Project Management
Projects	Suicide Risk Prediction Model - Developed a machine learning model to predict potential suicide risks by analyzing behavioral and sentimental data. - Integrated graph data analysis (Neo4j) to uncover hidden patterns and improve model accuracy. AI Search Agent – Hackathon Project - Built an AI-powered search agent designed to rank suppliers based on regression modeling and verification scoring. - Presented the solution at a hackathon, where the CEO of Mesh Works commended the project’s innovation and data accuracy. - Focused on developing ranking algorithms, supplier verification techniques, and real-world usability. Car Recommendation System - Designed and deployed a system that suggests cars based on customer preferences and purchase behavior patterns. - Applied predictive analytics to enhance recommendation relevance and user engagement. Robot Race (WSRO Nationals) - Competed at the WSRO national robotics competition, applying programming, hardware design, and teamwork skills in a dynamic setting.
Certifications And Achievements	- Neo4j Certified Professional – Neo4j Graph Academy - Data Analytics and Big Data Storage – Udemy - Programming Foundations: Java and Python Essentials – LinkedIn Learning - JavaScript and PHP Programming Complete Course – Udemy
Languages	English (Professional proficiency) Hindi (Fluent) Gujarati (Native)
